Solutions to Serve and Protect the U.S. Federal Government

Overview

Federal agencies must continually modernize their IT and cybersecurity environments. Doing so helps them better align with U.S. government directives and provide reliable, secure digital experiences. It's a significant task given labor shortages, ever-evolving cyber threats, and the demanding nature of maintaining legacy or homegrown applications.

HCLSoftware is in a unique position to address these concerns. We have a rich history of providing support and services to federal agencies and a robust product pipeline that aligns with governmental directives and regulations. For decades, we have provided security and digital experience support to government organizations. Our technology has played substantial roles in supporting agencies as they address massive initiatives, such as the Continuing Diagnostics and Mitigation (CDM) program and the Cybersecurity and Infrastructure Security Agency (CISA) to catalog known exploitable vulnerabilities (KEV). In fact, some of our products have been built specifically to comply with federal requirements.

Today, HCLSoftware helps federal agencies modernize their IT environments to respond to an ever-growing list of cybersecurity federal requirements, as well as the demand for superior customer, constituent, and employee experiences.

Cybersecurity: From Application to Endpoint

The cyber-threat landscape is constantly changing, making it difficult for organizations to keep pace and maintain a secure posture. The challenge is compounded when federal agencies struggle to attract and retain security skillsets.

HCLSoftware provides solutions that help government institutions overcome these issues while also meeting strict federal requirements for cybersecurity such as Executive Order 14028 and CISA's Binding Operational Directives 23-01 and 23-02.

On a broader scale, our solutions help federal agencies embed security from application to endpoint:

- Empower IT security and DevOps teams to rapidly pinpoint application vulnerabilities at every stage of the software development lifecycle. Our HCL AppScan solution is a "hacker in a box" toolkit, which provides automated security testing and monitoring tools that scan for vulnerabilities from the first line of code.

- Accelerate the Zero Trust journey by unifying and managing endpoints across on-premises and clouds environments. HCLSoftware solutions also help to ensure continuous compliance with intelligent automation that secures all servers, desktops, and mobile laptops.

- Rapidly identify and remediate threats. Our HCL BigFix solution has enabled federal agencies to effectively and efficiently mitigate vulnerabilities such as Log4j and MOVEit.
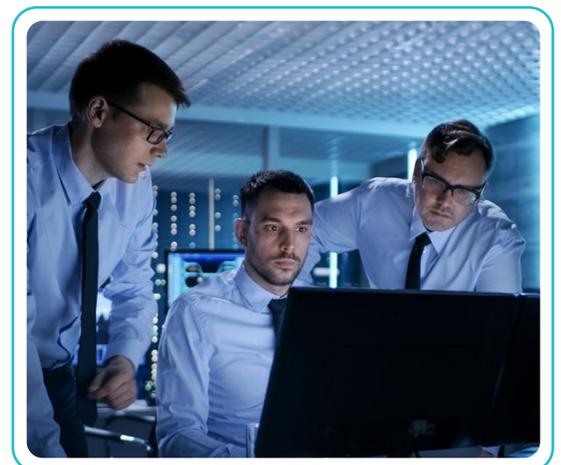

Holistic Digital Experiences for Citizens and Employees

Government agencies must provide modern experiences that enhance digital interactions. That requires constant innovation to keep up with mandates such as EO 14058 to provide direct lines of constituent engagement and feedback. Beyond requirements, customers and employees now expect seamless and secure experiences that rapidly give them access to the data and apps they need.

Empowering transformation is at the heart of everything HCLSoftware does, enabling federal agencies to provide holistic employee, customer, and constituent experiences. Our solutions allow organizations to modernize without overburdening existing IT teams:

- Effectively build highly engaging, retentive interactions for improved collaboration, data security, and ease of IT management. HCLSoftware's offerings include low-code/no-code solutions that streamline the development process and allow for the creation of highly personalized experiences.

Easily scale to address evolving federal mandates, as well as customer, constituent, and employee expectations. Our technologies enable agencies to add capabilities for innovation on the fly, while providing integrated digital experiences:

- Digitally transform and innovate by leaning into our rich history and deep expertise, which includes the well-established HCL Domino app development offering and our highly recognized HCL Digital Experience platform. Our digital transformation solutions create experiences that not only meet but also exceed agencies' objectives.

Accelerate the Transformation Journey

HCLSoftware solutions have transformed and modernized the IT environments of numerous federal agencies. Our products and services have been in use for decades, and we constantly innovate and incorporate customer feedback to remain at the forefront of cybersecurity and digital experience requirements.

No matter the challenges your organization is facing, or where it exists on its modernization journey, HCLSoftware solutions can help. Our products and services have been formally recognized for their reliability and security in meeting the most stringent demands.

Discover how HCLSoftware can help your agency achieve its modernization objectives.

HCLSoftware By the Numbers

- A $1.4 billion enterprise software business

- 19 innovation centers

- 20,000 clients globally

- 25+ years of experience working with federal agencies

- Solutions support 100+ operating systems and applications
